(54) Title: MODIFIED ADENOVIRAL FIBER WITH ABLATED TO CELLULAR RECEPTORS

(57) Abstract: The present invention concerns a modified adenoviral fiber containing at least one mutation affecting one or more amino acid residue(s) of said adenoviral fiber interacting with at least one glycosaminoglycan and/or sialic acid-containing cellular receptor, as well as a trimer of such a modified adenoviral fiber. The present invention also relates to a DNA fragment, an expression vector encoding said modified adenoviral fiber. The present invention also concerns an adenoviral particle lacking a wild-type fiber and comprising the trimer of modified adenoviral fibers as well as a process for producing such an adenoviral particle. The present invention also provides a composition comprising such an adenoviral particle and the therapeutic use thereof.
